DETAILED ACTION

1. This office action is in response to the reply filed on 07/06/2010.
2. Claims 1-2, 4-21 and 23-39 are pending in the application and have been examined.

Interview Record

3. Applicant has requested clarification of the record regarding the interview summary form mailed on 06/03/2010. As the summary states, a phone call was placed to the office of Stanley Spooner on 06/01/2010. The examiner was informed by Mr. Spooner's secretary that Mr. Spooner was in the office and would return the call. However, no return call was received and, because of the urgency of the information, the examiner determined that a message should be left with the secretary of Mr. Spooner (no voicemail was available). In addition to leaving a message with Mr. Spooner's secretary, the message was also recorded in an interview summary so that the communication would be noted in the record (and to ensure that Mr. Spooner received notification).

Allowable Subject Matter

4. Claims 1-2, 4-21 and 23-39 are allowed. Claim 1 recites the following allowable subject matter not taught by the closes prior art (Alverson - U.S. Patent 7,020,767; and Angelo - U.S. Patent 6,581,162): "setting at least one control value to an enable value, said at least one control value relating to a condition, said condition consisting of a respective one of (a) a domain that said processor is operating in, or (b) a mode that said processor is operating in or (c) a type of said monitoring function, said control value being set to be an enable value for said related

condition to indicate that said monitoring function is allowable in said first domain; allowing initiation of said monitoring function in said first domain when said condition is present if its related control value is set to said enable value and thereby indicates that said monitoring function is allowable; and not allowing initiation of said monitoring function in said first domain when said condition is present and its related control value is not set to said enable value and thereby indicates that said monitoring function is not allowable.” Claim 20 recites the following allowable subject matter not taught by the closest prior art: “a storage element configured to be set to contain at least one control value, said at least one control value relating to a condition, said condition consisting of a respective one of (a) a domain that said processor is operating in, or (b) a mode that said processor is operating in or (c) a type of said monitoring function, said control value comprising an enable value for said related condition, said enable value indicating that operation of said monitoring logic is allowable in said first domain; and control logic configured to control initiation of said monitoring logic and for allowing initiation of said monitoring logic in said first domain when said condition is present if its related control value is set to said enable value and thereby indicates that operation of said monitoring logic is allowable, and for not allowing initiation of said monitoring function in said first domain when said condition is present and its related control value is not set to said enable value and thereby indicates that operation of said monitoring logic is not allowable.”
